SUMMARY

Final year B.Tech student with skills in building AI/ML and GenAI projects using Python, LLMs, RAG, LangGraph, FastAPI and APIs. Interested in AI and API development, with a focus on building practical applications and learning new technologies.

EDUCATION

Bachelor of Technology in Computer Science Engineering
VIT Bhopal University
CGPA: 7.77/10
Expected Graduation: 2027

12th Standard
BNS DAV Public School
Giridih, Jharkhand
April 2022

10th Standard
Carmel Convent School
Giridih, Jharkhand
April 2020

SKILLS

- Programming: Python, SQL
- Generative AI: LLMs, RAG, Prompt Engineering
- AI Frameworks: LangChain, LangGraph, PyTorch
- AI/ML Libraries: Scikit learn, NumPy, Pandas
- Backend & APIs: FastAPI, REST API
- Vector Search: FAISS
- Tools: Git, GitHub, Streamlit, SQLite

PROJECTS

AI Meeting Intelligence Assistant (RAG) | Python, Streamlit, Faster Whisper, FAISS, Groq API, Sentence Transformers

- Built an AI meeting system that allows users to upload meeting documents and ask questions about their content.
- Used Python, RAG, FAISS, and LLM APIs to process documents and retrieve relevant information.
- Created APIs for document upload and question answering, with the LLM generating answers from the retrieved meeting content.

AI Multi Agent Travel Planner | Python, LangGraph, LangChain, Groq Llama 3.3, Tavily, Flight APIs

- Built an AI travel planner that takes user requirements and creates a complete travel plan with places, activities, and travel information.
- Used Python, LangGraph, LLM APIs, and multiple agents to divide the travel planning tasks.
- Integrated Tavily web search and flight APIs/tools to get real time travel information and generate itinerary.
- Implemented FastAPI endpoints to expose the multi agent travel planning workflow and integrated SQLite for persistent state storage.

FastAPI Document Analyzer | Python, FastAPI, Groq Llama 3.3, REST APIs

- Built an AI based API that allows users to upload documents and get useful information and analysis from them.
- Used Python, FastAPI, and an LLM API to process documents and generate the analysis.
- Created REST API endpoints for document upload and analysis and used environment variables to manage API keys securely.

CERTIFICATIONS

- CS50 Introduction to programming with python
- Introduction to machine learning with NPTEL
